Adaptive behavior refers to behavior that enables a person (usually used in the context of children) to get along in his or her environment with greatest success and least conflict with others. This is a term used in the areas of psychology and special education. Adaptive behavior relates to every day skills or tasks that the average person is able to complete, similar to the term life skills.

The relationship between a functional assessment-based parent intervention and preschoolers' challenging behaviors was examined in the current study. A single subject design with a multiple baseline across 2 parent-child dyads was implemented. The researchers collaborated with parents to design the FA-based interventions and parents received varying levels of support throughout the study.
