A brain-computer interface (BCI), sometimes called a neural-control interface (NCI), mind-machine interface (MMI), direct neural interface (DNI), or brain-machine interface (BMI), is a direct communication pathway between an enhanced or wired brain and an external device. BCI differs from neuromodulation in that it allows for bidirectional information flow.

Today, implanted electrode devices for stimulating the brain are extremely crude devices with only a handful of electrodes that are used to mitigate the effects of Parkinson's, epilepsy, and other ...

Researchers revolutionize brain-computer interfaces using

Brain computer interfaces have contributed in various fields of research. As briefed in Fig. 1, they are involved in medical, neuroergonomics and smart environment, neuromarketing and advertisement, educational and self-regulation, games and entertainment, and Security and authentication fields.. Brain computer interfacing: Applications and challenges

The Human Brain Project (HBP) is a large ten-year scientific research project, based on exascale supercomputers, that aims to build a collaborative ICT-based scientific research infrastructure to allow researchers across Europe to advance knowledge in the fields of neuroscience, computing, and brain-related medicine. The Project, which started on 1 October 2013, is a European Commission Future ...

Frequently in my early teaching career, I taught a computer literacy course. In this course I taught my student that a computer is a machine for the input, storage, processing, and output of information.

Beyond interfaces for analyzing model behavior, if we add model parameters as a substrate, the design space now allows us to consider interfaces for taking action on neural networks. Note that essentially all our interpretability techniques are differentiable, so you can backprop through them.

Optimization of the Ultrasound-Induced Blood-Brain Barrier

In a kind of spooky experiment, scientists at the Max Planck Institute for Human Cognitive and Brain Sciences reveal that our decisions are made seconds before we become aware of them. In the study, participants could freely decide if they wanted to press a button with their right or left hand. The only condition was that they had to remember when they made the decision to either use their ...

Intelligence To be intelligent you first have to know what being Intelligent is. And you also have to know what being ignorant is. Ignorant is just another word for "Not knowing". But not knowing is not always obvious or clearly understood. That's because learning is not fully understood. The more you learn the more you should realize what you didn't know.
